

The loop you'll repeat

Every guided step follows the same four moves. Do them in order — the prediction is the part that makes it stick.

What's on your screen

How to work through it

- 1 Choose a lab**
Start at the top of the sidebar list and work down.
- 2 Predict, then run**
Pick your answer, then press Set up & run this step.
- 3 Read the reveal**
Compare it to your prediction; read the feedback.
- 4 Explain it**
When asked, type one sentence on why it happened.
- 5 Beat the Challenge**
Each lab ends with a design goal — three tries.
- 6 Finish with the Capstone**
Diagnose four broken lines with nothing labeled.

Get your completion code

In the sidebar, open
Your progress → Get my completion code.
Copy the code it generates and submit it:

JCC-4K7Q-P2M9-...-B3

Good to know

- Your progress is saved automatically — you can close the tab and pick up where you left off.
- Green means good. If a prediction is wrong, that's fine — the miss is where the learning is.
- Stuck on a Challenge? Read the hint, then change one lever at a time.
